[1961]

GOLDEN BIRD TROPICALS 6102 Richfield Road Yorba Linda, California LAkeview 8-6016

Jim & June Wright

Dear Friends:

We believe that we can offer quality plants in a standard size at a standard price; therefore, you may add to your collection by choosing the plant rather than the price. All plants are out of $2\frac{1}{2}$ inch or 3 inch pots. Some plants are naturally larger growing than others and require the larger size pot. We try to pack so that all plants arrive in good condition. Please tell us when they do not.

As we are able to increase our list we will send you the additions. We grow many plants in such small quantities that cataloging is not possible. When seeking a specific plant please write us. Any cultural problems will be answered if a stamped envelope is included. Our motto is - - - -

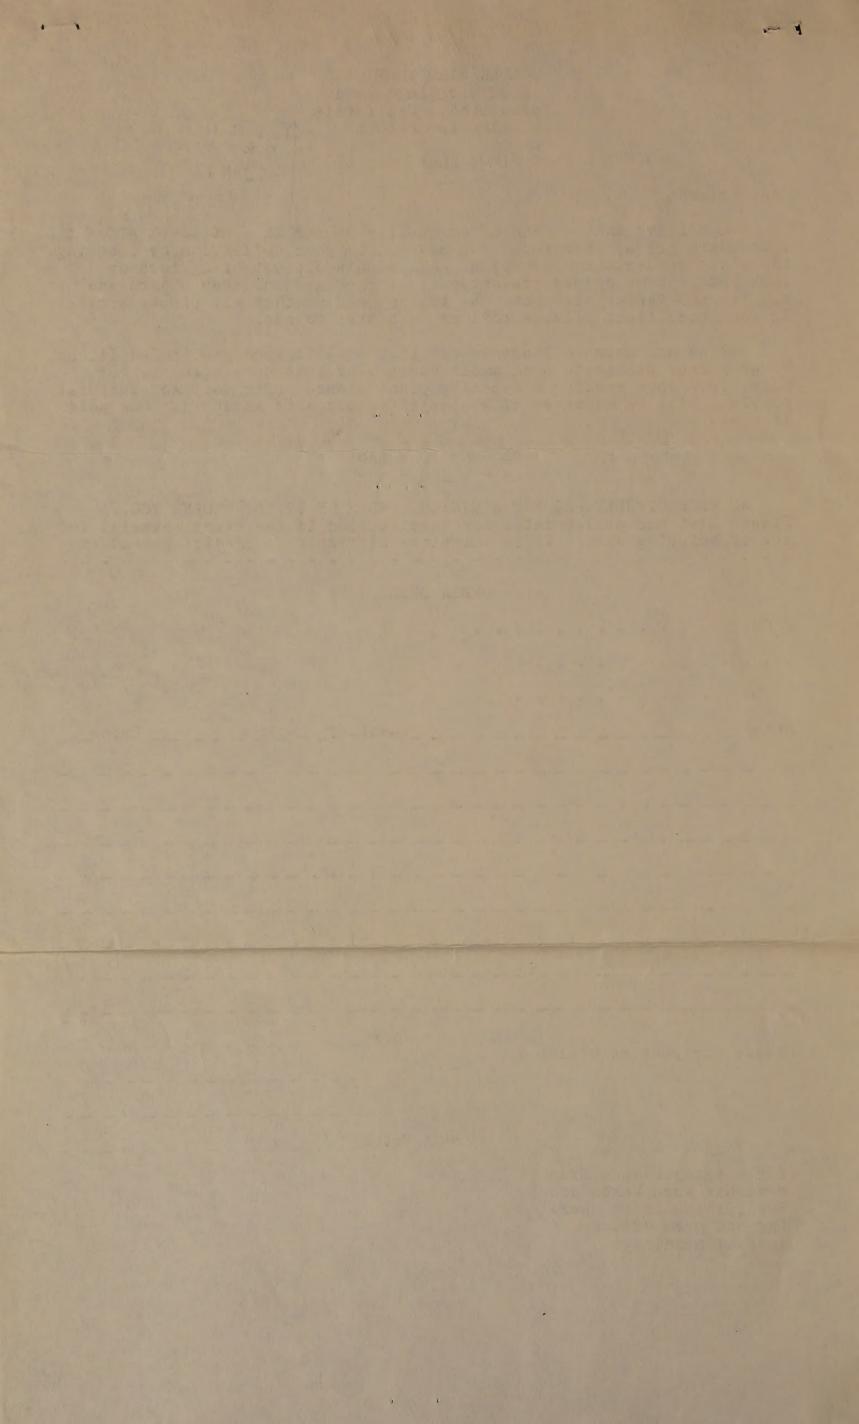

-WE GROW TO PLEASE-

WE RESPECTFULLY REQUEST A MINIMUM ORDER OF \$2.50. THANK YOU. Please list three alternates for substitution in the event material is out of shipping size. It is sometimes difficult to predict demand.

ORDER SHEET

FROM. Name______Quantity____Price__ Price___ Total_____ Grand Total_____

(For shipments made from November thru March add 50¢ for insulated packing and post-office special handling.)

ABUTILON STRIATUM THOMPSONI (Ghost tree, varigated flowering maple). 49¢
Long pointed maple shaped leaves. Soft downey surface is mottled
gold and pale green. Has salmon colored flowers like bells.
AESCHYNANTHUS MARMORATUM (Trichosporum-gesneriaceae) 45¢
A trailer with foliage of varigated brown, chartreuse green; red
undersides. Flowers are almost identically colored as foliage.
Stunning basket specimen. Slower growing than A. Pulchrum so give
it a year or two to develop to size.
AESCHYNANTHUS PULCHRUM (Trichosporum-gesneriaceae) 45¢
A shiny bright green trailer, lipstick red trumpet flowers. Very
showy-easy culture. Superb for basket or wall planter.
AGLAONEMA CUMMUTATUM 45¢
A very formal plant. Stiff, erect leaves with silver veins. Slow
growing, symmetrical, good foliage.
AGLAONEMA MODESTUM (Chinese evergreen) 45¢
Graceful, arching pointed leaves. Indispensable for planters.
ALPINIA PURPUREA (Dwarf ginger) 45¢
Foliage has true ginger odor when crushed. Interesting foliage
masses. Not easy to bloom so grow it for foliage.
ALTERNANTHERA RAMOSISSIMA 45¢
A tropical plant of purple red foliage and tiny pink powder puff
flowers. Very pretty in large tub or pot. Fast growing. Will
achieve sizable proportions in eight to ten weeks.
ARALIA PAPYRIFERA (Tetrapanax papyriferum) 45¢
Be prepared to give this one room. Large dulled gray leaves.
Very deeply lobed. Wooly white fuzz undersides.
ARALIA SIEBOLDII (Fatsia japonica) 45¢
The araliads are all fast growing. They are hardy to light and
easy to care for. This one has glossy green palmate leaves. Put
it outside in the shade during the summer.
BELEPERONE (Shrimp plant) 45¢
Pretty little sunny window plant with soft green foliage and
clusters of blooms in various shades, pink, salmon and white.
They curl somewhat like a shrimp tail.
BILLBERGIA • • • 45¢
These bromeliads are lots of fun to grow. All have pendulous
blooms in arctic shedos of mink green and chartraige They stand
blooms in exotic shades of pink, green and chartredse. They beard
blooms in exotic shades of pink, green and chartreuse. They stand winter storage well and can be good tub specimens.
winter storage well and can be good tub specimens. THEODORE MEADlarge leaves green and silver.

CISSUS STRIATA
A dainty miniature vine. Five leaflets daintily cut to cascade gracefully on sill or over basket. Slow and small. Small plants. CHLOROPHYTUM PICTURATUM (Airplane plant) 45¢
An old favorite for hanging baskets. We grow one variety only. The leaves are wide and white center stripe, green edge.
COCHLIOSTEMA 45¢ Slender recurving leaves with coppery cast to stems. Grows in
form of rosette and has odd little bloom spikes. COLUMNEA (Gesneriaceae) 45¢
These are hybrids and not named. The plants are vigorous growers and get leggy quickly. Foliage is stiff and has a pale velvety look, flowers are pale salmon to buff, and form along the drooping stems at the leaf axils. Need warmth and humidity.
CORREA MAGNIFICA This family of plants are often referred to as the Australian
fuschia. We have found this variety to be the most unusual both in bloom and foliage. The leaves are small, dime sized. The tops are gray-green and the undersides and stems have an overtone of
copper plush. The flowers are chartreuse and resemble Lily of the valley in shape. Quite easy to keep in tub or pot for indoors and outdoors duing mild weather.
COPROSMA BAUERII (Mirror plant) 45¢ variegated yellow 75¢ The leaves are so shiny you can see your reflection in them. A strong foliage plant, good for contrast. Bloom is insignificant.
The plain green is vigorous. The varigated is less hardy. CRASSULA ARGENTEA 45¢
The very striking "Jade plant". Can be grown in a container for many years and assumes the character of "Bonsai". When plant is several years old, the entire plant is covered with tiny delicate
clusters of pale pink flowers. This plant is very effective as a center piece decorated with ornaments according to the season.
CROSSANDRA Flowers are salmon colored and leaves are dark shiny green. 45¢
Inclined to get leggy, keep cut back. CRYPTANTHUS ROSEA PICTA 45¢
This is a precious little bromiliad with a built in light meter. When getting enough light for healthy growth, the same as any house plant needs, it has an overall rosy complexion. Too much and it gets maroon, too little and it bleaches to dull green. Bromiliads have very small root structure and need very little care.
CUPHEA IGNEA (Firecracker plant) This cute little pot plant is sure to be commented on, fast growing.
So keep it nipped out to encourage the little firecracker red blossoms. Blooms almost constantly. Tender to frost.
DRACENA DRACO A very modern tropical looking plant. Strap shaped leaves with
tiny narrow line of red on edge. EPISCIAS (Flame violet) 45¢
We have several varieties. Some are named and others are unlabeled seedlings. As the stock of each kind varies we do not feel it practical to list by name. If you want a particular one we will
select it first, otherwise the largest plants in any variety are shipped first.
EPISCIA DIANTHIFLORA This one Episcia is so different from the others we feel it is a
distinct and singular plant. Our large stock plant survived a month of temperatures in the low forties and is in perfect condition. It is a natural miniature and the young plants are very small.
Flowers are white and the tiny leaves are velvety green. FATSHEDERA LIZEI (Ivy aralia) • • • 45¢
This is presumed to be natural cross between English ivy (Hedera Helix) and the Aralia Sieboldii. The leaf structure is similiar
to Aralia and can be trained easily to any shape. DIEFFENBACHIA PICTA (Green & white) DIEFFENBACHIA R. ROEHRSII (Chartruese & white) 45¢
These are exotic foliage plants. Give good light and ample water with fast drainage. Will get large so repot every six months.
GREWIA CAFFRA (Lavender star flower) The flowers are double stars of rich lavender borne in clusters all along the branches. It is quite willowy and can be trained on trellis.
GARDENIA MYSTERY Here you have the same lovely blooms you see at the florist. The
plant grows very well in a pot, needing only a little extra attention to fertilizing to insure good color. We have bloomed these plants
in three inch pots.

HEMAGRAPHIS COLORATUS A good basket plant of unusual coloring. Dark green and purple foliage. Has small white flowers with purple bracts. This plant has been called a "red ivy", but it is decidedly purple, nor an ivy. HIBBERTIA VOLUBILIS (Guinea gold vine) Vining or trailing plant, evergreen. Large yellow blossoms resembling a single rose. Blooms prolifically in summer. when quite small, around 18 inches. Can get good size in tub. HAEMANTHUS PUNICEUS An evergreen bulbous plant. Leaves are wide thick and shiny. Blooms are yellowish orange and look like a pin cushion. These are followed by large orange berries that remain a long time. Very unusual. HIBISCUS These are the true natives of Hawaii and will flourish with bloom during the hottest weather. When temperatures drop below 40 degrees they drop some leaves and yellow quite a bit. Because they grow so rapidly we have them available in 3" pots only during April, May, June and July. The single are usually larger growing and hold their buds well. The doubles drop as many as they open. Any variety. Red. . .double or single Pink . .double or single White. .single only Yellow .double or single HOYA CARNOSA Everyone who sees a hoya in bloom wants one. The flowers appear to be made of velvet and wax. Pale pink on most varieties, cream to white on others. We carry the following varieties. Choice of any CINNAMOMUM (Latifolia).striped leaves flowers. Seldom grows over 18". HYPOESTES SANGUINULENTA (Pink dot, freckle face) . . . 45ϕ A darling little house plant. Foliage is dark green with tiny little pink dots. The flowers are lavender and very dainty. ISOLOMA PICTA (Kohleria) A large growing gesneriad. Leaves are velvety green. The blossoms are really unusual. They are tubular and flared at the tip. The upper half of the blossom is bright yellow and the lower half bright red spotted with yellow. The blooms keep coming on four to six months. COLLECTION any two for. . . 45¢ IVY COLLECTION 1. Glacier or Iceburg-small light green, edged with white. Fan or green ripple-broad wedge shaped, sage green. Curly-real ruffled leaves heavy substance. Needlepoint-very small narrow pointed leaves. Sweetheart-perfect heart shaped leaves. California Gold-an improved form of Goldust, flecked yellow. Hybrid English-pretty ruffled leaf, dark green. Manda's Crested-soft, frilly leaves, light yellow green. Heart of Gold-golden heart in dark green leaf. JACOBINIA OBTUSIOR (Jacob's crown, Brazilian plume plant) An entirely different type of house plant. Large green leaves slightly tinged red underneath. The blooms are rosy pink, very large and carried upright on the plant. Will stand severe pruning for size control. Needs lots of water and occasional feeding. JACOBINIA SUBERECTA An orange flowered variety of the above. The blooms are more sparse and the foliage is smaller and a grey green. Decidedly different. JASMINE We have received so many requests for perfume jasmines. Actually no one particular plant is associated with the manufacture of perfumes, although jasmine is synonomous with fragrance. All of this group are beautifully scented. 1. Jasmine Magnigicum. . . shiny pointed leaves, 1 to 12 inch flowers shaped like a pinwheel, pure white. Rangy. 2. Jasmine Sambac (Grand Duke). .a lovely double flower, much like a camellia but a creamy white. Bushy growth habit. Slow. Jasmine Maid of Orleans. .a rangy plant, long tubular blossoms pure white. Faster growing than others.
 Rhynchospermum Jasminoides. .star jasmine. .a true vine. Shiny dark green leaves. White star shaped fragrant blooms.

Comp 17 subsides Alexander Weeken and the
Small white flowers. Faster growing.
LIGULARIS (Leopard plant) 459
This is an old favorite. Sometimes called a leopard Begonia spotted yellow leaves. Is shade loving. Flowers are like daisys.
LOTUS BERTHOLETTI 459
This is a little difficult to ship because the stems are brittle and
you must use extreme care in unpacking. The foliage is a soft grey
green and very ferny looking. The blossoms form all along the stems
and trail over the edge of the pot. They are bright orange-red and
look like little bird heads. Makes a lovely basket.
MAHONIA BEALII 45¢
This is a hybrid member of the Oregon grape family. It has very stiff
grey-green leaves very deeply lobed and of a heavy substance. The
blooms are yellow and are followed by blue berries. These are quite
small to start with but grow rapidly and will be a spectacular plant
for a doorway or picture window. MARANTA TRICOLOR 45¢
A dwarf form, foliage is green & white on upperside, red on bottom
side. Temperamental, curls up when cold or dry.
MARICA GRACILIS (Apostles Plant)
An interesting plant with iris like foliage. The fan of leaves send
out trailing stems which bear exquisite blue and white flowers. They
only last a day and are followed by one or two more and then the stem
puts out a new little plant. Eventually the stem reaches the ground
and the little plant roots there.
MURRAEA EXOTICA 454
Finely divided leaves of shiny bright green. Graceful habit of
growth. White fragrant blooms, like small trumpets very different. NAUTOCALYX FORGETTI (Gesneriaceae) 45¢
NAUTOCALYX FORGETTI (Gesneriaceae) 45¢ A two toned brown and yellow foliage flowers yellow. Popular as an
accent in planter arrangements. By itself it well acheive a height
of three feet, pyramidal in habit of growth.
NAUTOCALYX LYNCHI (Red satin)
This is a beauty. Leaves a dark red with a fluorescent sheen. Slower
growing but ultimately as large as forgetti. Color wise it is a
very showy addition to your collection.
PEDILANTHUS TITHYMALOIDES VARIGATUR

```
RHOEO DISCOLOR (Moses is a boeat)
    This is lovely tropical with wide strap shapped leaves, dark green on
    top and a rich purple underneath. The tiny white blossoms form in a
    boat shaped bract in the axils of the leaves, hence the name.
RUELLA AMOENA
    A bushy upright plant, shiny leaves, bright red trumpet like flowers,
    a late winter bloomer. Needs a large pot to grow well. Keep
    pinched to develope flowering wood.
RUELLA MAKOYANA
    A trailing plant with pretty softly variegated leaves. The flowers are pale lavender. Inclined to be sparsley foliated but pinching
    helps to keep the stems covered.
    Round fuzzy leaves with a bronzy overtone. Good brisk grower. Fills
SAXAFRAGIA BRONZE BEAUTY
    a basket quickly with trailing plantlets and delicate white flowers.
SANSEVERIA HAHNII
    This hardy plant is a low growing rosette type. Does not get out of
    hand and can be easily divided when outgrown.
SCHEFFLERA ACTINAPHYLLA (Australian umbrella tree)
    Very lovely tropical plant. Has same uses as philodendron. Leaves
    are made up of several leaflets and can get 22" to 26" in diameter
    when grown in the open. Shiny and firm green leaves with an umbrella
    like growing habit. Can nip out the top to produce side shoots.
SPATHIPHYLLUM CLEVELANDII
    I find it hard to describe this one. Similiar to the anthurium in
    general appearance. Leaves are harrower and more willowy. Flowers
    are palest green to white and make georgeous corsages and flower
    arrangements. It is easy to grow and blooms over a long period.
STROBILANTHES DYERIANUS
One of the choicest pot plants for color. Foliage is purple with silver veining in formal pattern. A slow grower.

SYNGONIUM PODOPHYLLUM Plain green or Variegated. . . .
                                         Plain green or Variegated. . . . 45¢
    A very hardy indoor foliage plant. They are natural climbers and
    will trail if not supported.
                                                 25\phi each or 2 for. . . . 45\phi
TRADESCANTIA
    Always popular for window gardens. We have two nice ones.
         1. Silvery white amd green striped foliage. Fast grower.
         2. Blossfliediana - a purple leaves variety, dainty flowers.
